1. LIGHTING GOALS

1 *Determine what your lighting goals are*

Task lighting is focused on the space you are using to work. Ambient or indirect lighting is used for ambiance and for overall lighting of a space. Each room in your home should have a mood you want to set, as well as a function you want your lighting to serve.

For each room in your home decide a mood you want to set, as well as a function you want your lighting to serve and write everything down.

ROOM	GOAL
LIVING ROOM	
DINING ROOM	
KITCHEN	
BATHROOM	
BATHROOM	
BEDROOM	
BEDROOM

2 *Make sure to size the decorative fixture to the space*

and make sure the size proportions are correct.

Before going shopping, take all the measurements of your apartment and take pictures. Bring everything to the shop. It will help you choosing the most appropriate lighting options for your home.

Room:_____

Size:_____

3 Inside your home use multiple light sources for one space

For rooms like the kitchen, bedrooms, and living spaces, multiple light sources will help you achieve a variety of functions and activities in that space. In the kitchen, for example, under counter lights can provide great task lighting.

4

Consider that any light fixture will have two personalities…

lit and unlit. So when you are in the shop, ask to turn the lights on and off so you can see the difference.
